hypertrehalosemic hormone - beetle (Zophobas rugipes)
C;Specias: Zophobas rugipes
C;Specias: Zophobas rugipes
C;Date: 03-Feb-1993 #sequence_revision 03-Feb-1993 #text_change 09-Jul-2004
C;Accession: B43976
R;Gaede, G; Rosinski, G
Peptides 11, 455-459, 1990
A;Tille: The primary structure of the hypertrehalosemic neuropeptide from tenebrionid be A;Reference number: A43976; MUID:90341081; PMID:2381871
A;Recession: B49976
A;Molecule type: protein
A;Residues: 1-8 <GAE>
A;Cession: B49976
C;Superfamily: adipokinetic hormone
C;Superfamily: adipokinetic hormone
C;Superfamily: adipokinetic hormone
C;Keywords: amidated carboxyl end; corpora cardiaca; hormone; neuropeptide; pyroglutamic
F;1/Modified site: pyrrolidone carboxylic acid (Gln) #status experimental
F;8/Modified site: amidated carboxyl end (Trp) #status experimental
C;Date: 03-Feb-1993 #sequence_revision 03-Feb-1993 #text_change 09-Jul-2004

A;Molecule type: protein
A;Residues: 'Z'.2-10 «GAEZ>
C;Comment: Hypertrehalosemic factor II lacks the tryptophan modification.
C;Comment: Hypertrehalosemic factor II lacks the tryptophan modification.
C;Comment: This peptide raises hemolymph levels of trehalose in the cockroach Periplanet;
C;Superfamily: adipokinetic hormone
C;Reywords: amidated carboxyl end; glycoprotein; hormone; neuropeptide; pyroglutamic acid
F;I/Modified site: pyrrollidone carboxylic acid (Gln) #status experimental
F;8/Binding site: carboxylatate (Trp) (covalent) #status experimental
F;10/Modified site: amidated carboxyl end (Thr) #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       C,Accession: S09138

Isolation and primary structure of a peptide from the corpora

Cardiaca of Heliothis zea with adipokinetic activity.";
Biochem. Biophys. Res. Commun. 135:622-628(1986).

- I- PUNCTION: This hormone, released from cells in the corpora

Cardiaca atter the beginning of filght, causes release of
diglycerides from the fat body and then stimulates the flight

C Hunustics to use those diglycerides as an energy source.
--- SUBCELDLAR LOCATION: Secreted.
--- SIMILARITY: Belongs to the AKH / HRTH / RPCH family.

PIR: A24244; AA4244.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

"Sequence analyses of two neuropeptides of the AKH/RPCH-family from the lubber grasshopper, Romalea microptera.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FUNCTION: This hormone, released from cells in the corpora cardiaca after the beginning of flight, causes release of diglycerides from the fat body and then stimulates the flight muscles to use these diglycerides as an energy source. SUBCELLULAR LOCATION: Secreted. SIMILARITY: Belongs to the AKH / HRTH / RPCH family.

Biol. Chem. Hoppe-Seyler 371:475-483(1990).
-!- FUNCTION: This hormone, released from cells in the corpora cardiaca after the beginning of flight, causes release of diglycerides from the fat body and then stimulates the flight muscles to use these diglycerides as an energy source.
-!- SUBCELLUIAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the AKH / HRTH / RPCH family.
PIR; S10596; S10596.
